Psychology 220:

The History of Psychology

Dr. Dean Keith Simonton, Distinguished Professor of Psychology

Course Goals: We will examine the history of psychology from two perspectives, namely, theory and application. The core question from the theoretical perspective is the extent to which the key figures and events in the history of the field can be explicated in terms of empirical findings in the metasciences, with special emphasis on the psychology of science. The central issue from the applied perspective is the degree that the history of psychology can provide guidance for (a) evaluating the scientific status of contemporary psychology and (b) helping researchers make high-impact contributions to some subdiscipline of psychological science.

Prerequisite: Graduate standing or consent of instructor.

The Details

GRADING

Your grade will be based on the following:

- I. Overall class participation (10%)
- II. Three brief class presentations with discussion:

- A. On a high-impact article or book in psychology based on a chapter chosen from The Anatomy of Impact (20%)
- B. On a influential psychologist in the field based on a chapter chosen from Psychologists Defying the Crowd (20%)
- C. On the subject of your term paper, providing an abstract of that analysis (20%)

III. Term paper in which a major figure in psychological science is analyzed in terms of the profile of the typical great psychologist (30%)
